

Control Panel Install Instructions

Step 1: Remove and unpack the panels.

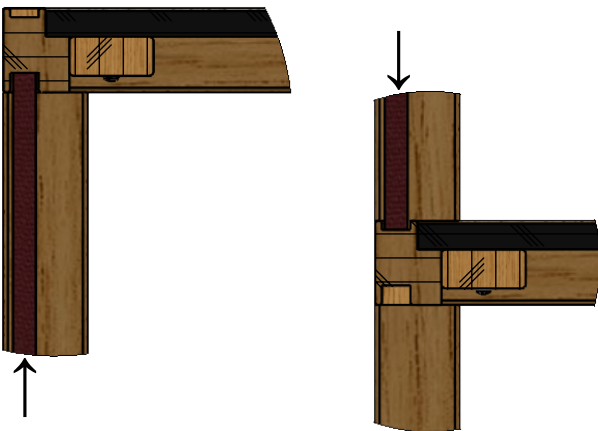

Step 2: Panel can be installed without the need for any tools or external hardware.

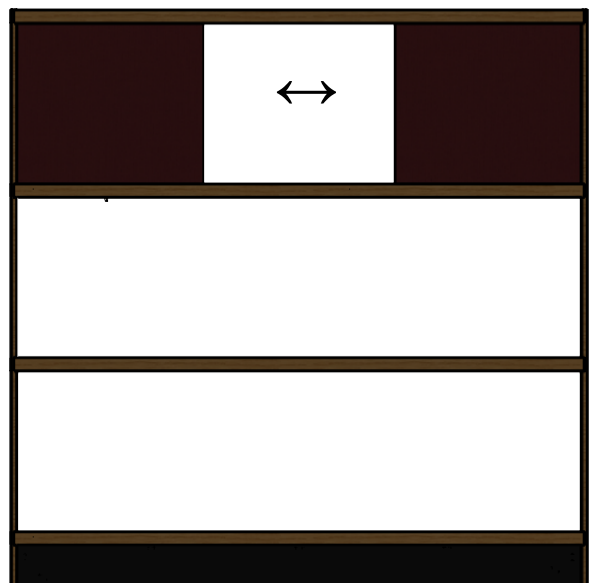

Step 3: Slide panel into the top track at a slight angle, making sure that the bottom edge clears the bottom rail.

Step 4: Insert panel fully into the top track, align the bottom of the panel with the bottom track. Allow panel to drop into bottom track.

Step 5: Panels can be adjusted left and right freely. Simply push the panels along the track.

Control Corner Install Instructions

Step 1: Remove and unpack the shelves, hardware, and install template.

Step 2: Align the shelf install template to the top of the shelf and front edge of the Control unit.

Step 3: Mark the 3 hole locations; repeat for all shelves. *The template is double sided. In the case the holes get damaged during marking you can simply flip the template and use the other side.*

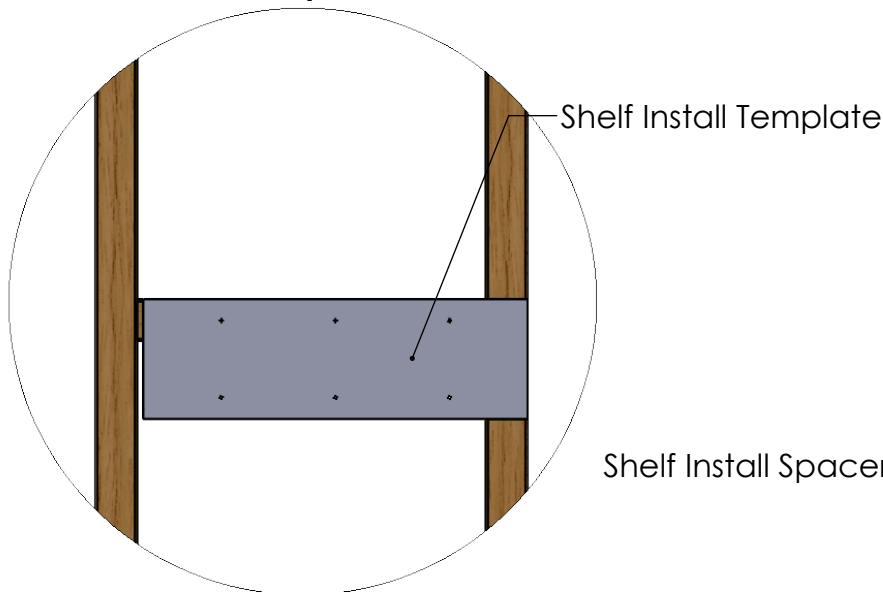

Step 4: Drill marked locations using a 9/64" drill bit.

Step 5: Install included screws. To fine tune screw depth use a screwdriver and the supplied shelf install spacer; screw head should be snug in the spacer. The spacer can then be slid out from behind the screw.

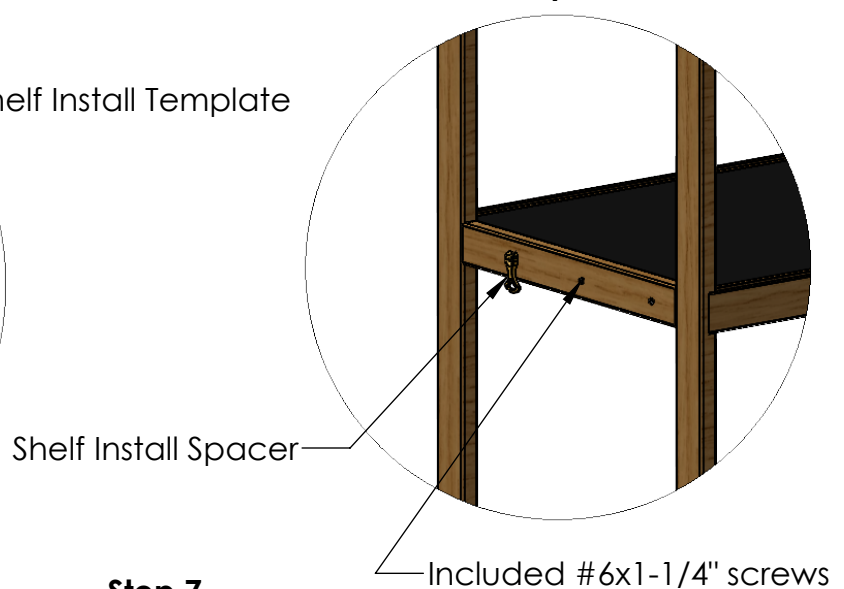

Step 6: Repeat steps 2 through 5 on the adjoining Control unit.

Step 7: Align the Corner Shelf mounting holes to the installed screws. Install the Corner Shelf by applying downward pressure, locking the shelf in.
